

Cooking Recipes Application

Team of 2 - specification draft

Team Members: Roşcu Edward, Păvăloni Robert-Iulian

General Description:

This application aims to help Users by giving them a list of recipes made by “Head Chefs”. They can search in this list by introducing words contained in the recipes name. Any “Chef” (logged in user) can rate and add comments on recipes.

A **recipe** should contain its name, calories number, list of ingredients, the recipe itself and optionally a picture.

Unauthenticated user:

Anyone can search for recipes by words contained in the recipes name.

Registration (for both Junior and Head Chef):

In order to rate and comment on a recipe, the user needs to first register into the application by selecting one of the 2 roles: Junior and Head Chef. Both roles require a unique username, a password and the basic information like full name and email address.

Junior Chef:

After the Junior Chef logs in, besides the benefits of a logged in user, he can save his favourite recipes to use them later.

Also, after logging in, he can see his list of saved recipes. He can add or remove recipes from it.

Head Chef:

A Head Chef needs to login into the application in order to create new recipes or add changes to them.

Also, a logged in Head Chef can check his list of recipes to see how well they are doing (by their rating and comments of other Chefs).
